Instantiate Architectural Elements, Allocate Responsibilities, and Define Interfaces

Design Decision and Location	Rationale
Storing local data in the **Web application** temporary and then move and save it to the **Server Application** Side	CON-3 requires to backup the local data during the registration time frame just in case if the application lost connectivity.
Allowing changes by some specific clients to make changes in the **Server Application** from **Client Side**	Like the admin and UC-12 UC-8 UC-9 UC-10 which relates to QA-2.
